
ASSIGNMENT 1

PROGRAMMING PRACTICES

- Write proper comments in your code.
 - You can consult the book for the solution but refrain from using GPT, try to be comfortable in being uncomfortable.
1. Write a program to display a "?", read two capital letters, and display them on the next line in alphabetic order.
 2. Write a program that will prompt the user to enter a hex digit character ("0",..., "9" or "A",..., "F"), display it on next line in decimal, and ask user if he or she wants to do it again. If the user types "y" or "Y", the program repeats. If the user types anything else, the program terminates. If the user enters an illegal character, prompt the user to try again.

Sample output:

```
Enter a Hex digit: 9 Do you want to do it again? Y
Enter a Hex digit: c
Illegal character— Enter 0....9 OR A...F: C
In decimal it is 12
Do you want to do it again? N
```

3. Write a program to display extended ASCII characters(ASCII codes 80h to 0 FFh). Display 10 characters per line, each character separated by a blank. Stop after the extended characters have been displayed once.

NOTE

- In a zip folder, include the .asm file containing the code and also the output from the emulator screen for each task.
-
